GOOGLE ANDROID HAS BACKDOORS → I have a quick warning for you. Google Android has backdoors on purpose to access your phone. Solutions already exist. If you can, buy [Purism](#), [Unplugged](#) or a [Light Phone](#). I had an iPhone in the past, and even a Windows Phone, and now I currently hold an Android phone due to lack of options. However, ever since I became anti-big tech, I began searching for alternatives but from my view they are only inside The United States. In the meantime, I'm documenting the backdoors on Android phones to try to deconstruct the current dangers against Entrepreneurs and CEOs. Anyway, make sure to have the right technology in your hands if possible as you try to build an international business. If you can't do that, document what you have as much as you can for others. The Global Market and Capitalism are under attack by companies that act as capitalist enterprises, but are sabotaging new entrepreneurs instead. Watch out.
