MARKET FACT #189

1000

IP Addresses is what's available to North Korea for internet access.

The country's computer specialists use them to attack other countries.

DATE: January 9, 2024

COMMENT: Yes that's right. Only 1,000 IP Addresses is what North Korea has to access the Internet. It's limited access. Nonetheless, the North Korean government instills cybercrime and its computer specialists use these scarce IP resources to attack nations like South Korea, the USA, European nations, among others. Some experts estimate that there are between 600 to 1300 hackers working for Kim Jong-un (crackers actually). Mainly, North Korean's hackers usually steal about 80% while Russian hackers keep 20% in cyber heists.

A MESSAGE FOR BRANDS

BUSINESSES ONLY: Are you reading too many cards or articles? Then [you probably need Professional Consulting Projects.](#) That will boost your Marketing/Business results in a short amount of time. [Prices start at €399 per hour.](#) Buy a Project. Save time. Grow your business now. The market does not wait.
