MARKET FACT #323

40x

**more emissions NITROUS OXIDE
has since 1980 to 2020. The gas
lasts in the atmosphere for A
CENTURY (100 years).**

DATE: September 5, 2024

COMMENT: Once again, MIT Tech Review has more worth sharing: “**over that time it can trap over 200 times more heat than carbon dioxide does in the same period. Cutting down on these emissions will largely require careful adjustment of soil management practices in agriculture. Decreasing use of synthetic fertilizers, applying the fertilizer we do use more efficiently, and choosing products that eliminate as many emissions as possible**”–
