MARKET FACT #354

3rd

LARGEST emitter of greenhouse gasses is Food waste. OBS: *Honestly, Top 3 actually.*

DATE: September 17, 2024

COMMENT: Interesting data points that you need to know apart from the main topic above: “When food scraps enter the landfill, it emits methane as it breaks down. Globally, landfills and wastewater emit 67 million metric tons of methane — that’s 20% of methane emissions, according to the United Nations. When food waste breaks down it also produces nitrogen, which when exposed to air, forms nitrate, which can then leach into the groundwater, which is often times used as our drinking water.....When we waste food we also waste the natural resources it involves to produce it.” – [SOURCE: EcoWatch](#).

A MESSAGE FOR BRANDS

BUSINESSES ONLY: Are you reading too many cards or articles? Then [you probably need Professional Consulting Projects](#). That will boost your Marketing/Business results in a short amount of time. [Prices start at €399 per hour](#). Buy a Project. Save time. Grow your business now. The market does not wait.
