DATE: October 30, 2025

COMMENT: Once more, the year of 2025 has its main points to monitor. But it's not a simple year. For starters, [2025 is the year where the failure of A.I. initiatives increased a lot. Now, around 42% of companies expect to abandon their A.I. projects.](#) That's right. Companies are abandoning A.I. projects. Additionally, despite that business reality, [2025 is the year where Amazon will make an unprecedented \\$100 billion investment in A.I. infrastructure.](#) One of the largest investments in Tech history. And because A.I. is in the mix of online publishing, users around the world and obviously in USA are adding content like never before: [2025 is the year where The USA passed the Take It Down Act, requiring platforms to remove intimate AI-generated content within 48 hours.](#) But the world has more subjects. [The year of 2025 is the year where there will be 360 MILLION Chinese over the age of 60 years old. Close to the same size of The USA just of old people.](#) This means fewer producing in CHINA. And China itself is hurting its people because [2025 is the year where 10 core high-tech sectors are involved on changing CHINA for World Markets.](#) The younger generation will have to upskill and reskill fast. Robots are here: [2025 is the year where 1,000 Walker S2 industrial humanoids will be deployed.](#) A Chinese robot that can change its own battery under 3 minutes. This means fewer jobs in manufacturing for Chinese people. And then there's big wealth leaving Europe: [2025 is the year where 16,500 millionaires are leaving The UK.](#) And talking about wealth, in [2025 GOLD accumulated an increase of over 40%](#) because of how Markets are playing out. Next there's hope coming from Europe: [2025 is the year where GERMANY pledged to issue 200,000 professional visas,](#) with 90,000 being precisely marked to Indians to counter USA's visa issues. And in Brazil, [2025 is the year where in BRAZIL the number of app-based drivers and delivery workers reached 2.1 million. But they're not employees.](#) This means a considerable workforce in Brazil not having employee rights. If A.I. is being deployed fast by The U.S., and 3rd world countries are having a hard time establishing businesses while trying to deploy A.I., companies will have to fight for talent.
